Detailed Description

... agricultural product is received at a management information system.

The agricultural product data is automatically compared against
compliance requirements stored by the management information system. A
compliance result is automatically generated based on the...

...block diagram illustrating an exemplary collection of data records that
may be maintained within a database in an agricultural management
information system .

Figure 13 is a block diagram illustrating further architectural details
of an agricultural management information...

...embodiment of the present invention, of automatically generating a compliance result based on the automated comparison of agricultural product data against compliance requirements in the form of certification requirements.

Figure 15 is a flow chart illustrating a method...

...leafhoppers identified within a particular trap both seasonally and over a number of years, the reports being generated by the agricultural management information system.

7

Figure 17B illustrates an example of a weekly pest management monitoring report, as generated by the agricultural management information system.

Figure 17C illustrates an exemplary aggregate report that graphically...

...per year measured in acre/feet for a group of wine grape growers, the aggregate report being generated by the agricultural management information system.

Figure 17D illustrates an exemplary pesticide use report, as generated by the agricultural management information system.

DETAILED DESCRIPTION

A method and system to capture data...be communicated to the relevant certification or accreditation authority, that, at block 70, may optionally generate a certification or accreditation report.

At block 72, the agricultural management information system 50 may optionally perform a regulatory compliance...

...at block 58.

In a similar manner, at block 86, an agricultural manager 56 may generate a report request for a report pertaining to one or more agricultural products, this request being transmitted to the agricultural management...field 126. The contents of the GPS field 140 may also be utilized to enhance reports generated by the agricultural management information system 50, by providing a further level of detail regarding ...and memory system 278 operates to control the processor 230 and the memory 234.

A report generation system 280, in one embodiment, operates to generate a report or record from the data received from the data capture system 268, as well as...

...this end, a date and time system 282 provides date and time information to the report generation system 280. Further, the storage device 236, in one embodiment, stores identification information identifying a...

...300 commences at decision block 302, with the determination as to whether a record or report generated by the report/record generation system 280, and composed of the previously captured data pertaining to an agriculture product, is...illustrating an exemplary collection 400 of data records 102 that may be maintained within the database 103 of the agricultural management information system 50.

Figure 12 also illustrates that the collection 400 of records 102 may be indexed...

...408 for various authorities (e.g., regulatory, accreditation, certification). For example, a first set of reports 410 may be generated for an organic certification authority based on information contained in the records. A further set...

...412 may be generated for a non-profit watchdog organization, and yet another set of reports 414 generated for a regulatory authority (e.g., the EPA). Each of the reports 408 may furthermore...
...one or more lot codes 404 and one or more UPCs 402 associated therewith. The generation of the exemplary reports 408 will be described in further detail below.

Architecture - Agricultural Management Information System 50
32...

...information system 50 is shown to include a certification server 454 that is responsible for generating reports utilizing records, pertaining to an agricultural product, obtained from custodial locations constituting a chain of server 454 may report to a user 451. For example, the report 474 may be generated in real-time responsive to an inquiry from the user 451. Alternatively, the report 474 may be generated once sufficient agricultural product data has been collected from the various submitters, and the report...

...the record 102 and accessed at any time.

The certification server 454 also includes a report tool 475 that operates to generate custom reports (e.g., daily, seasonal or yearly pest management reports) based on the agricultural product data...
...embodiment of the present invention, of automatically generating a compliance result based on the automated comparison of agricultural product data against compliance requirements in the form of certification requirements. While the method 500 is described below as generating...

...of a certification record (or regulatory compliance record or accreditation compliance record) by performing a comparison of compliance requirements against the captured agricultural product data.

As described above, the compliance requirements for a specific...

...specified in a guideline record 458. The creation of the certification record 510 may include generating a compliance report that provides metrics, derived from the agricultural data, against a number of factors specified by...specific UPC 402 and lot code 404 within the collection 400 being maintained within the database 103 of the agricultural management information system 50.

At block 528, having identified the appropriate records 102, the agricultural management information system...

...nonetheless be appreciated that the information embodied in the records 102, as stored by the database of the agricultural management information system 50, is also very useful to a farmer (or producer, processor, etc.) for the purposes...report tool 475 is able to extract the appropriate data from the located records, and generate textual or graphic reports. To this end, Figure 17A shows exemplary seasonal reports 600 and historic reports 602 of...

...identified within a particular trap both seasonally and over a number of years. Additionally, the report tool 475 generates graphs to provide a visual representation of observed or measured values for a particular characteristic.

Figure 17B provides a further example of a weekly pest management monitoring report 620 that may be generated by the report tool 474 responsive to a request from a user 451. Once again, the information displayed...

Claim

... receiving agricultural product data relating to an agricultural product at a management information system;
automatically comparing the agricultural product data against compliance requirements stored by the management information system; and
automatically generating a compliance result based on the...A system automatically to certify an agricultural product, the system including:
a comparator automatically to compare agricultural product data against compliance requirements stored by the management information system; and
a reporter automatically to generate a compliance result...

...against the compliance requirements. 137. The system of claim 136 wherein the reporter is to generate the compliance report by structuring the agricultural product data according to the compliance requirements. 138. The system of...

Claims

English Abstract

A method to capture data pertaining to an agricultural product commences with the capture of location data (450) indicating the location of a custodial location (48) within a chain of custody for agricultural products by capturing a location identifier associated with the location. Product data, reflecting the condition of...

Detailed Description

A METHOD AND SYSTEM TO CAPTURE DATA PERTAINING TO AN AGRICULTURAL PRODUCT , TO RECORD A CHAIN OF CUSTODY FOR AN AGRICULTURAL PRODUCT , AUTOMATICALLY TO CERTIFY AN AGRICULTURAL PRODUCT , AND TO COMMUNICATE AGRICULTURAL PRODUCT INFORMATION TO A CONSUMER

FIELD OF THE INVENTION

The present invention relates to information systems...

...information appliances for, inter alia, agricultural certification compliance, agricultural regulatory compliance, agricultural process management, and agricultural product marketing. More particularly, the present invention relates to capturing and providing data about agricultural products , practices and conditions with high integrity and credibility to consumers, regulatory agencies and certification authorities, agricultural process managers and agricultural product developers, processors and handlers.

BACKGROUND OF THE INVENTION

Consumers and purchasers of food and other agricultural products are becoming increasingly concerned about the exact natures of the foods that they are eating...

...non-governmental eco-label certification programs) neither require nor prescribe real-time certified monitoring of agricultural production practices. There presently exists a n-dsmatch between the methods and tools of prior art...

...informational needs and demands of the agricultural process manager, public and regulatory and certifying agencies, agricultural product processing,, transportation and distribution agents, and consumers.

In addition, there is a rapidly increasing concern...

...of the present invention there is provided a method to capture data pertaining to an agricultural product. Location data indicating a first location is captured, the location data being captured from a... present invention there is provided a method of recording a chain of custody for an agricultural product. Location data is captured at least at a first location of a plurality of locations associated with an agricultural product, the location data identifying the first location. Custodial data is captured at each of the plurality of locations associated with the agricultural product, the custodial data identifying a respective custodian of the agricultural product at each of the plurality of the locations. A chain of custody record is automatically created to include an agricultural product identifier, the location data and the custodial data.

According to a third aspect of the present invention, there is provided a method of automatically certifying an agricultural product. Agricultural product data relating to an agricultural product is received at a management information system. The agricultural product data is automatically compared against compliance requirements stored by the management information system. A compliance result is automatically generated based on the automatic comparison of the agricultural product data against the compliance requirements.

According to a fourth aspect of the present invention, there is provided a method of communicating agricultural product information to the user. A request is received at a management information system for agricultural product information, the request including an agricultural product identifier. An agricultural product record, identified using the agricultural product identifier, is accessed at the management information

4

system, the agricultural product record including agricultural product data collected along a chain of custody of the agricultural product. The agricultural product data is communicated responsive to the request.

Other features of the present invention will be...

...similar elements and in which.

Figure 1 is a diagrammatic representation of an exemplary agricultural system within which the present invention may be deployed.

Figure 2 is a diagrammatic illustration of...

...method, according to the present invention, of capturing, managing, processing and outputting data pertaining an agricultural product.

Figure 4 is a diagrammatic representation of the capture of data at multiple units that...

...at each of the units of a chain of custody and thereafter communicated to the agricultural information system.

Figure 6 is a block diagram illustrating a compliance and chain of

custody system,, according...

...of custody constituted by a collection of custodians, each of which provides input to the agricultural management information system .

Figure 7 is a diagrammatic representation illustrating a plurality of data capture devices, connected via a network to each other and to an agricultural management information system , according to an exemplary embodiment of the present invention.

Figures 8A - 8D are diagrams illustrating...

...according to an exemplary embodiment of the present invention, of capturing data pertaining to an agricultural product .

6

Figure 12 is a block diagram illustrating an exemplary collection of data records that may be maintained within a database in an agricultural management information system .

Figure 13 is a block diagram illustrating further architectural details of an agricultural management information system , according to an exemplary embodiment of the present invention.

Figure 14 is a flow chart...

...the present invention, of automatically generating a compliance result based on the automated comparison of agricultural product data against compliance requirements in the form of certification requirements.

Figure 15 is a flow chart illustrating a method, according to an exemplary embodiment of the present invention, of communicating agricultural product information to a user.

Figure 16A illustrates the communication of a user interface by an agricultural management information system , via a network, to a computer system for display.

Figure 16B illustrates exemplary labels, each bearing a respective barcode, as applied to an assortment of agricultural products .

Figure 17A illustrates exemplary seasonal reports and historic reports of a number of leafhoppers identified...

...trap both seasonally and over a number of years, the reports being generated by the agricultural management information system .

7

Figure 17B illustrates an example of a weekly pest management monitoring report, as generated by the agricultural management information system .

Figure 17C illustrates an exemplary aggregate report that graphically illustrates water use efficiency per year...

...feet for a group of wine grape growers, the aggregate report being generated by the agricultural management information system .

Figure 17D illustrates an exemplary pesticide use report, as generated by the agricultural management information system .

DETAILED DESCRIPTION

A method and system to capture data pertaining to an agricultural product , to record a chain of custody for an agricultural product , automatically to certify an agricultural product , and to communicate agricultural product information to a consumer, are described. In the following description, for ...skilled in the art that the present invention may be practiced without these specific details.

Agricultural System - Overview and Terminology

Figure 1 illustrates an exemplary agricultural system 10 that includes an agricultural production system 15 and agricultural production outputs 16. The production system 15 may in turn conceptually be viewed as including one or more components that contribute towards the agricultural production outputs 16. These components may include production units 18, production practices 20, inputs 22, biological processes 24, and time 26. The outputs 16 may include agricultural products 28 and impacts 30 on environmental, economic and social systems.

8

For the purposes of the present specification, agricultural systems 10 shall be taken to include, but not be limited to, land-based (e.g...

...acids, etc.), chemical (e.g., distilling, etc.) or other production processes and actions to prepare agricultural products for ingestion or use by a human, animal, or plant.

Agricultural products 28 may be taken to include, but not be limited to, grains, beans, vegetables, fruits...

...unit) or a geographically meaningful unit (e.g., a section,, township,, and range).

The terms agricultural product processing or food processing mean herein any operation or action made to prepare an agricultural product 28 for ingestion or use by a human, animal, or plant.

The terms farm, ranch, forest operation, fishing operation, and processing facility include herein an agricultural production venture,, enterprise, operation, location, site or other point of origin, wherein or whereby an agricultural, chemical or biochen-deal process is sponsored, effected or managed and that produces an agricultural product 28 that is meant to be,, or is likely to occasionally be, used or ingested...

...of the terms farm, ranch, forest operation, fishing operation, and processing facility further include an agricultural production venture,, enterprise, operation, location, site or other point of origin, wherein or whereby an agricultural product 28 that is meant to be, or

is likely to occasionally be, used in a...

...salt water fishing areas and locations.

The term lot is defined as two or more agricultural products 28 that originate from the same unit of production 18. Further, agricultural products 28 of a lot may be harvested or processed in substantially the same way during...

...combine production units 18, inputs 22, biological processes 24, and time 26 to produce the agricultural products 28. Examples of production practices 20 may include, but are not limited to, crop residue ...and unintended

alternations to biological, economic and social processes and systems as a result of agricultural production system 15. The term biological impact is herein defined as an, unintended or intended impact of agricultural production system 15 on biological processes and conditions. The agricultural production system 15 can have impacts on air, water, and land from pollutants (e.g., sediment, dust...

...The term economic impact is herein defined as an unintended or intended impact of an agricultural production system 15 not accounted for in the trade value or sale price of agricultural product 28. The term social impact is herein defined as an unintended or

13
intended impact of an agricultural production system 15 on the health, safety, educational, and standard of living conditions and opportunities of individuals and communities and the treatment of animals. Example economic impacts resulting from agricultural production systems 15 include the individual, community,, and government cost of additional water treatment to remove agricultural...

...water quality regulatory oversight and clean-up. Examples of social impacts that may result from agricultural production system 15 include poverty from low paying and season jobs, limited availability of affordable and safe...

...to pesticides), limited opportunities for education or training, decreased consumer confidence in safe and affordable agricultural products 28, inhumane treatment of animals, and increased regulatory oversight.

Figure 2 illustrates how seasonal production...

...of an exemplary method 40 of capturing, managing, processing and outputting data pertaining to an agricultural product . At a high level, the method 40 may conceptually be viewed as composing a data...

...and a reporting component 46.

14

Contributors, processors and users of the data concerning the agricultural product include custodians 48 of the agricultural product , an agricultural management information system 50, a regulatory/certification/accreditation authorities 52, consumers 54 of the agricultural product 28, and agricultural managers 56.

The method 40 commences at block 58 with the capture, by custodians 48 of an agricultural product 28, of product data pertaining to the agricultural product, the product data reflecting a condition pertaining to the product at a custodial location. In one embodiment...

...block 62, the created data record is communicated from a respective custodian 48 to the agricultural management information system 50 that, at block 62, proceeds to store the received data record together with an internal identifier 64.

At block 66, the agricultural management information system 50 performs a certification process to create and store a certification record indicating that a particular agricultural product, for which data has been received from one or more custodians 48, complies to one...

...at block 70, may optionally generate a certification or accreditation report.

At block 72, the agricultural management information system 50 may optionally perform a regulatory compliance process to create and store a compliance record...

...At block 78, a consumer 54 may generate a request for certain information regarding an agricultural product (e.g., whether the product complies with certain certification standards). As will be described in...

...communication device (e.g., a network-coupled personal computer) which is then communicated to the agricultural management information system 50.

At block 80, the agricultural management information system 50 retrieves data pertaining to one or more agricultural products identified in the consumer request and, at block 82, transmits the received data to the...

...manager 56 may generate a report request for a report pertaining to one or more agricultural products, this request being transmitted to the agricultural management information system 50 at block 88. At block 90, the agricultural management information system 50 retrieves one or more reports and other pertinent data and, at block 92, transmits...

...constitute a chain of custody. The submission, by each of such units 100, to the agricultural management information system 50 for storage 16

within a database 103, of records 102 that embody the captured data pertaining to the agricultural product. The units 100 may conceptually be viewed as comprising units of production 104, and units

...operations to generate individual data records of product data reflecting conditions pertaining to a relevant agricultural product at a respective unit. For example, a unit of production 104, as defined above with...

...processing operations 112. According to an exemplary embodiment of the present invention, data pertaining to agricultural products at the

relevant unit of production 104 may be gathered as part of the operations
...

...include combinations and permutations of processing operations 112,
storage operations 114 and transport operations 116, agricultural
product data being captured as part of such operations.

While the described operations are illustrated in...

...at each of a chain of units that constitute a chain of custody of an
agricultural product and the submission of such product data to the
agricultural management information system 50, for example in the form
of the records 102, it will be appreciated that the agricultural
management information system 50 is able to provide a global view of a
chain of custody and
17
conditions pertaining to the agricultural product at each custodial
location constituting the chain of custody.

Figure 5 is a diagrammatic representation...at each of the units 100 of a
chain of custody and communicated to the agricultural management
information system 50. In one embodiment, the record 102 may be
constructed by the data capture device at the custodial location, and
communicated to the agricultural management information system 50 as
a record. In an alternative embodiment, the agricultural product
data, as captured by the data capture device, may simply be communicated
to the agricultural management information system 50, which then
formats the received data as the record 102.

A unique identification field...

...record, a unique identifier for the particular record that also serves
to identify the relevant agricultural product for which the record
120 pertains. In one exemplary embodiment, a unique identifier for a...

...thereof.

A time field 122, for each record 102, stores a time at which the
agricultural product data included within the record 102 was captured.
A date field 124 similarly stores a...

...one of the units 100 discussed above with reference to Figure 4) at
which the agricultural product data was captured. In one embodiment,
the data in the place field 126 indicates one of multiple custodial
locations for a particular agricultural product.

A person field 128 stores an identifier for a person, or operator, at a
custodial location who was responsible for the capture of the
agricultural product data. An activity field 130 may store information
identifying an activity (e.g., any one of the operations 108 - 116
described above with reference to Figure 4) pertaining to the
agricultural product and to which the captured data pertains. For
example, an activity
18
indicated in the...

...production, the applying of the pesticide at a unit of production, the

harvesting of an agricultural product, the packaging of an agricultural product, etc.
An equipment serial number field 132 stores an identifier for data capture equipment utilized...

...of the GPS field 140 may also be utilized to enhance reports generated by the agricultural management information system 50, by providing a further level of detail regarding location of a custodial location.

Figure...

...of which provides input, for example in the form of a record 102, to the agricultural management information system 50. The system 150 is also shown to include a collection of regulatory/certification/accreditation authorities 52 that interact with the agricultural management information system 50 to at least partially automate regulatory compliance, certification or an accreditation processes. The exemplary custodians 48 include an agricultural production system 15, a packaging custodian 152, a transportation custodian 154, a processor custodian 156, a wholesale...

...Outside the chain of custody, a consumer 54 is also shown to interact with the agricultural management information system 50.
Each of the custodians 48 is further shown to access one or more data...

...48. Each data capture device 170 is furthermore shown to be in communication with the agricultural management information system 50, so as to facilitate the communication of the captured product data from the data capture device 170 to the agricultural management information system 50.

A data capture device 170 utilized by a custodian 48 may be a hand...

...any electromagnetic frequency communications (e.g., optical, infrared (IR) or radio frequency (RF) communications).

The agricultural management information system 50, as will be described in further detail below, comprises one or more applications executing...

...on one or more data storage systems.

The data capture devices 170 communicate with the agricultural management information system 50 utilizing a communications network, such as the Internet, the Plain Old Telephone Service (POTS)...

...Network (LAN).

20

A collection of authorities 52 are also shown to interact with the agricultural management information system 50. Such ...California Department of Pesticide Regulation (DPR), etc.). The interaction of the authorities 52 with the agricultural management information system 50 will also be described in further detail below.

Data Capture

Further details regarding exemplary embodiments of the capture 42 of data

concerning an agricultural product will now be described.

Figure 7 is a diagrammatic representation illustrating a plurality of data...

...connected via a network 180 (e.g., the Internet) to each other and to the agricultural management information system 50. Each of the data capture devices 170 is located at a respective custodial location...

...to capture pertinent data. The data capture devices 170 also include a stand-alone computer system 184 that communicates agricultural product information on a data storage media 186 (e.g., a CD ROM or any other optical, magnetic or opto-magnetic storage medium) that is provided to the agricultural management information system 50. Accordingly, the computer system 184 is not required to be coupled to the network...

...hand-held device 182 is utilized by an operator conveniently to record data concerning an agricultural product

21

at various locations within a chain of custody and production cycle through which the agricultural product proceeds. The hand-held device 182 may be utilized by any of the custodians 48...

...present invention proposes a method by which product data, reflecting a condition pertaining to an agricultural product, be associated with location data identifying a location within the chain of custody. Further, the...

...proposes allowing a custodian 48 to capture product data, reflecting a condition pertaining to an agricultural product, at the relevant custodial location 201. To this end, Figure 8A shows the hand...

...appreciated that, within different environments and at different custodial locations 201, a wide variety of agricultural product data may be captured. Accordingly, a wide variety of data capture applications may be executed...For example, a product data code 204 may reflect an observed condition pertaining to an agricultural product at a custodial location identified by the location code 202. It will be appreciated that...

...e.g., a Universal Product Code (UPC embodied within a barcode associated with a particular agricultural product as illustrated in Figure 7. It will be appreciated that a product identification code 206...

...thousands of lettuce heads), a product identification code 206 is not associated with each individual agricultural product. However, at a downstream packaging custodian 152, such product identification codes 206 may be associated with each individual agricultural product.

In one embodiment of the present invention, the record 102 described above with reference to...

...the information captured by the hand-held device 182 is simply relayed via the computer system 181 to the agricultural management information system 50 that then composes the record 102. In a further embodiment, the information captured by the hand-held device 182 is

communicated via wireless transmission

25

directly to the agricultural management information system 50 that then composes the record 102. In any event, it will be appreciated that... signals from the processor to generate a display (e.g., a user interface to receive agricultural product data).

The hand-held device 182 is powered by an internal power source 238 (e...

...identifier 138 to the captured data or data report 102 prior to transmission to the agricultural management information system 50. Such

27

witnesses may include a second custodian, certification agent, accreditation agent, thirdparty representative...

...a base computer system 192 that then, via the Internet, communicates this data to the agricultural management information system 50. In an alternative embodiment, the hand-held device 182 may be physically coupled to...

...in order to transfer information to the base computer system 192 for propagation to the agricultural management information system 50. In yet a further embodiment, the hand-held device 182 may be coupled directly to the Internet, and may itself communicate the captured data to the agricultural management information system 50.

Data CNture - Methodology

28

Figure 11 is a flow chart illustrating a method 300, according to an exemplary embodiment of the present invention, of capturing data pertaining to an agricultural product. The method 300 commences at decision block 302, with the determination as to whether a...

...report/record generation system 280, and composed of the previously captured data pertaining to an agriculture product, is to be stored. If so, at block 304, the report, or record, is stored...the location data is provided.

29

At block 312, the hand-held device 182 accepts agricultural product data, for example in the form of a product data code 204 as describe with

...

...signal.

The product data captured at block 312 may comprise any data pertaining to an agricultural product. For example, the product data may be environmental data, indicating environmental conditions associated with an agricultural product. Such environmental data may, for example, reflect growing environment and conditions (e.g., soil nutrient...

...18. The product data may also include characteristic data indicating a specific characteristic of an agricultural product. For example, such characteristic data may indicate the size, weight, calorie, color, brix, or other observable or measurable characteristic of an agricultural product. The product data may also comprise activity data recording details of an activity performed with respect to an agricultural

product .

For example, the activity data may reflect the timing and volume of pesticides applied at...

...data could also reflect data concerning any processing, distributing, packing, treating or handling of the agricultural product at any one of the custodial locations discussed above. The product data may furthermore include economic data indicating costs of production associated with an agricultural product (e.g., material, water, energy, equipment, management, land, capital, and labor costs). Further, labor (or...

...at block 312 to identify personnel that contributed toward the production or processing of the agricultural product . Such personnel or data may include personnel identification, labor location and labor time, merely for...a video recorder). Such captured audio or video may be digitized, and stored by the agricultural management information system 50 as part of the record 102.

Chain of Custody - Database
Figure 12 is a...

...400 of data records 102 that may be maintained within the database 103 of the agricultural management information system 50. Figure 12 also illustrates that the collection 400 of records 102 may be indexed...

...UPC 402 or the lot code 404 may comprise the unique identifier 120 of an agricultural product data record 102, as illustrated in Figure 5. Each of the records 102 may be linked to further records and reports pertaining to a specific agricultural product , or agricultural product lot, so that a hierarchical data structure of records and reports that comprises the collection 400 is defined. An exemplary chain of custody 406 for an agricultural product is also illustrated in Figure 12.

In addition to records 102 that are generated at...

...The generation of the exemplary reports 408 will be described in further detail below.

Architecture - Agricultural Management Information System 50
32

Figure 13 is a block diagram illustrating further architectural details of the agricultural management information system 50, according to an exemplary embodiment of the present invention. The agricultural management information system 50 is shown to receive data records 102, including at least location and product data...

...and other submitters 452. In an alternative embodiment, raw data may be received at the agricultural management information system 50, which then itself composes the record 102.

The agricultural management information system 50 is shown to include

a

certification server 454 that is responsible for generating reports utilizing records, pertaining to an agricultural product, obtained from custodial locations constituting a chain of custody for the relevant agricultural product. To this end, Figure 13 illustrates a first database 103 storing a collection of records...

...database 105, which is shown to include product records 456 that include detailed information regarding agricultural products, guideline records 458 (e.g. organic certification guidelines, Marine Stewardship Council accreditation guidelines, EPA Clean Water Act standards, etc.), agricultural production system records 460 that include details regarding agricultural production systems 15 (e.g., such as those described with reference to Figure 1), custodian records 462...

...chain of custody, lot records 464 that may contain additional information regarding a lot of agricultural products, and quality records 466 (e.g., size, color, purity, brix level, harvest date, etc.). In...

...guideline records 458 of the database 105. The certification tool 472 operates automatically to compare agricultural product data, in the form of the records 102, against the compliance requirements specified within such...an inquiry from the user 451. Alternatively, the report 474 may be generated once sufficient agricultural product data has been collected from the various submitters, and the report 474 may then be...

...generate custom reports (e.g., daily, seasonal or yearly pest management reports) based on the agricultural product data received from various submitters. Further details regarding the report in process will be provided...

...generate a regulatory compliance certificate as a compliance result based on the comparison of the agricultural product data against regulatory compliance requirements as specified in one or more guideline records 458. An...

...the present invention, of automatically generating a compliance result based on the automated comparison of agricultural product data against compliance requirements in the form of certification requirements. While the method 500 is...

...458 within the database 103. To this end, a custodian, for example, may when submitting agricultural product data specify that the record is contributing towards a determination as to whether a particular agricultural product complies with certain organic standards criteria. In a further embodiment, a witness may authenticate some...

...record or accreditation compliance record) by performing a comparison of compliance requirements against the captured agricultural product data.

As described above, the compliance requirements for a specific certification record may be specified...

...in a relational database as a distinct record that is keyed (or linked)

to the agricultural product data record 102.

Methodology - User Product Information Retrieval

Figure 15 is a flow chart illustrating a method 520, according to an exemplary embodiment of the present invention, of communicating agricultural product information to a user (e.g., a consumer, farmer or certification authority), The method 520...

...of a serial number (e.g., a UPC) by an inquiring user 451 to the agricultural management information system 50.

In one exemplary embodiment, the input of the serial number to the system 50 may be via a computer system 532 coupled via a network 180 to the agricultural management information system 50, as is illustrated in Figure 16A. In the exemplary embodiment shown in Figure 16A...

...performs a read operation of the relevant barcode 536.

Figure 16A also illustrates that the agricultural management information system 50 may communicate a user interface 538, via the network 180, to the computer system...

...language (HTML) document) that is generated by a web server that forms part of the agricultural management information system 50. The input by the user to the interface 538 is communicated, via the network 180, back to the agricultural management information system 50 as a request for agricultural product information.

Figure 16B shows example labels 534, each bearing a respective barcode 536, as applied to an assortment of agricultural products.

Further, while Figure 16A illustrates a personal computer system 532 as being an input device, it will be appreciated that the request for agricultural product information may be inputted, by user 451, into any of a number of network-connected devices for communication via the network 180 to the agricultural management information system 50. For example, an appropriate interface to harvest information to be included in such

...15, at block 524, the user may optionally input a lot number for a particular agricultural product. The lot number may be entered in any one of the ways described above for the input of the serial number.

At block 526, the agricultural management information system 50, having now received a serial number and/or a lot number, proceeds to locate...

...lot code 404 within the collection 400 being maintained within the database 103 of the agricultural management information system 50.

At block 528, having identified the appropriate records 102, the agricultural management information system 50, and more specifically the certification tool 472 of the certification server 454, proceeds to

...

...document (e.g., a HTML document) that is generated by a web server of the agricultural management information system 50, and
39
communicated via a network 180 to a computer system 532 operated by...

...comprise a list of standards (e.g., certification, regulatory, accreditation, etc.) with which the relevant agricultural product complies. This embodiment may be directed towards a consumer who is interested in only high...

...528, is described above as being performed responsive to the receipt of a request for agricultural product information, it will be appreciated that the comparison operation may be performed offline, prior to...

...reference to Figure 15 provides an example of reporting a level of compliance of an agricultural product, based on agricultural product data collected along the chain of custody, with a standard (e.g., a certification standard...

...that the information embodied in the records 102, as stored by the database of the agricultural management information system 50, is also very useful to a farmer (or producer, processor, etc.) for the purposes of evaluating performance of and reviewing of, an agricultural production system 15 over time (e.g., a season or one or more years as described in...in a manner similarly described with reference to Figure 15, input information pertaining to an agricultural production system (e.g., a unit of production identifier), responsive to
40

which the report tool 474 of the certification server 454 locates records associated with the relevant agricultural production system 15 (e.g., a field of land). In addition to an identifier for an agricultural product system 15, the request from the farmer may include a specific characteristic in which the user...

...descriptive and inferential statistics so as to provide a meaningful comparative view of the captured agricultural product data. Such reports go beyond a mere "yes/no" compliance, and enable a user to differentiate between custodians of an agricultural product based on a selected one, or multiple, metrics (e.g., environmental conditions, quality,, time to...

...may, in one embodiment, be generated as markup language documents that are communicated from the agricultural management information system 50, via the network 180, to a computer system 532.

Thus, a method and system to capture data pertaining to an agricultural product, to record a chain of custody for an agricultural product, automatically to certify an agricultural product, and to communicate agricultural product information to a consumer, have been described. Although the present invention has been described with...

Claim

1 A method to capture data pertaining to an agricultural product, the method including:
capturing location data indicating a first location, the location data

being captured...

...capture of the product data comprises capturing environmental data concerning environmental conditions associated with the agricultural product .

45

. The method of claim 1 wherein the capture of the product data comprises capturing characteristic data concerning a characteristic of the agricultural product .

13 The method of claim 1 wherein the capture of the product data comprises capturing activity data concerning an activity performed with respect to the agricultural product , the activity being performed at the first location.

14 The method of claim 13 wherein...

...one of a group including pre-production, production, processing, distributing, packing, treating, and handling the agricultural product .

15 The method of claim 1 wherein the capture of the product data comprises capturing economic data concerning costs of production associated with the agricultural product .

16 The method of claim 15 wherein the costs of production include any one of...

...and

product data sets at respective custodial locations along a chain of custody of the agricultural product , and storing the plurality of location and product data sets as the data record.

20...

...including capturing product data at respective custodial locations along a chain of custody of the agricultural product , and storing the product data captured at the custodial locations together with product identification information...

...23 The method of claim 1 including capturing custodial data identifying a custodian of the agricultural product at the first location and composing the data record to include the custodial data.

24...and digital video data.

43 A data capture device to capture data pertaining to an agricultural product , the device comprising:

at least one data capture component to capture location data indicating a first location and to capture product data pertaining to the agricultural product , the location data being captured from a location identifier physically associated with the first location and the product data reflecting a condition pertaining to the agricultural product at the first location; and
a storage component automatically to store a data record including...

...location and product data.

62 A method of recording a chain of custody for an agricultural product, the method including:
capturing location data at least at a first location of a plurality of locations associated with an agricultural product, the location data identifying the first location;
capturing custodial data at each of the plurality of locations associated with the agricultural product, the custodial data identifying a respective custodian of the agricultural product at each of the plurality of the locations; and
53

automatically creating a chain of custody record including an agricultural product identifier, the location data and the custodial data.

63 The method of claim 62 wherein the first location comprises a unit of production in which the agricultural product is produced.

64 The method of claim 62 wherein the first location comprises a biologically meaningful unit in which the agricultural product is produced.

65 The method of claim 64 wherein the ...of claim 62 wherein the first location comprises a politically meaningful unit in which the agricultural product is produced.

67 The method of claim 66 wherein the politically meaningful unit includes any...

...method of claim 62 wherein the first location comprises a management unit by which the agricultural product is processed.

69 The method of claim 62 wherein the first location comprises a biologically meaningful unit in which the agricultural product is processed.

54

. The method of claim 62 wherein the first location comprises a politically meaningful unit in which the agricultural product is processed.

71 The method of claim 62 wherein the first location comprises any one of a group of units by which the agricultural product is produced, including

units of processing, storage, distribution and sale.

72 The method of claim...

...document.

78 The method of claim 75 wherein the chain of custody request includes the agricultural product identifier.

79 The method of claim 78 wherein the agricultural product identifier comprises any one of a group of identifiers including a Universal Product

Code (UPC...

...62 wherein the capture of the location data includes receiving the location data and the agricultural product identifier at a management information system.

86 The method of claim 85 wherein the location data and the agricultural product identifier are received at the management information system via a communications network from a remote...

...the custodial data includes receiving at least a portion of the custodial data and the agricultural product identifier at a management information system.

88 The method of claim 87 wherein the custodial data and the agricultural product identifier are received at the management information system via a communications network from a remote location.

89 A system to record a chain of custody for an agricultural product , the system including:

at least one data capture device to capture location data at least at a first location of a plurality of locations associated with an agricultural product , the location data identifying the first location, and to capture custodial data at each of the plurality of locations associated with the agricultural product , the custodial data identifying a respective custodian of the agricultural product at each of the plurality of the locations; and

57
an information system, to be...

...least one data capture device, automatically to create a chain of custody record including an agricultural product identifier, the location data and the custodial data.

90 The system of claim 89 wherein the first location comprises a unit of production in which the agricultural product is produced.

91 The system of claim 89 wherein the first location comprises a management unit by which the agricultural product is managed.

92 The system of claim 89 wherein first location comprises a biologically meaningful...

...wherein the first location comprises any one of a group of units by which the agricultural product is processed, including units of processing, storage, distribution and sale.

95 The system of claim...document. 101. The system of claim 98 wherein the chain of custody request includes the agricultural product identifier.

102. The system of claim 101 wherein the agricultural product

identifier
comprises any one of a group of identifiers including a Universal
Product Code (UPC...

...politically meaningful unit. 106. The system of claim 89 wherein the
location data and the agricultural product identifier are received at
the management information system via a communications network from a
remote...

...captured at least at a first location of a plurality
of locations associated with an agricultural product, the location
data
identifying the first location;
receive custodial data captured at each of the plurality of locations
associated with the agricultural product, the custodial data
identifying a respective custodian of the agricultural product at
each
of the plurality of the locations; and
automatically create a chain of custody record including an
agricultural product identifier, the location data and the custodial
data. 108. A system to record a chain of custody for an agricultural
product, the
system including:

60

first means for capturing location data at least at a first location of a
plurality of locations associated with an agricultural product, the
location data identifying the first location, and for capturing custodial
data at each of the plurality of locations associated with the
agricultural product, the custodial data identifying a respective
custodian of the agricultural product at each of the plurality of the
locations; and

second means, to be coupled to the first means, for automatically
creating a chain of custody record including an agricultural product
identifier, the location data and the custodial data. 109. A method of
automatically certifying an agricultural product, the method
including:

receiving agricultural product data relating to an agricultural
product at a
management information system ;
automatically comparing the agricultural product data against
compliance
requirements stored by the management information system; and
automatically generating a compliance result based on the automatic
comparison of the agricultural product data against the compliance
requirements.

61

. The method of claim 109 wherein the compliance result comprises a
compliance report structuring the agricultural product data according
to the compliance requirements. 111. The method of claim 110 wherein the
compliance...

...112 wherein the relative compliance indication
indicates a level of compliance relative to a further agricultural
product .

115. The method of claim 109 including, if the agricultural product
data

satisfies the compliance requirements, then automatically generating an affirmative compliance result.

116. The method...

...affirmative compliance result

comprises an accreditation. 119. The method of claim 109 including, if the agricultural product data does not satisfy the compliance requirements,, then automatically generating a negative compliance result. 120. The method of claim 109 wherein the agricultural product data includes any one of a group of information types including pre-production, production, environmental...

...product

characteristic, social, or economic information.

121. The method of claim 109 including receiving an agricultural product identifier, and automatically comparing the agricultural product data against the compliance requirements responsive to, the receipt of the agricultural product identifier. 122. The method of claim 121 wherein the agricultural product identifier is received at the management information system via a communications network. 123. The method...

...document. 127. The method 124 wherein the compliance report comprises a certification report regarding the agricultural product .

128. The method of claim 124 wherein the compliance report comprises an accreditation report.

129...caught, and genetically-modified organism (GMO) free requirements. 136. A system automatically to certify an agricultural product , the system including:

a comparator automatically to compare agricultural product data against compliance requirements stored by the management information system; and a reporter automatically to generate a compliance result based on the automatic comparison of the agricultural product data against the compliance requirements. 137. The system of claim 136 wherein the reporter is to generate the compliance report by structuring the agricultural product data according to the compliance requirements. 138. The system of claim 137 wherein the compliance...

...139 wherein the relative compliance indication

indicates a level of compliance relative to a further agricultural product . 142. The system of claim 136 wherein the reporter, if the agricultural product data satisfies the compliance requirements,, is automatically to generate an affirmative compliance result.

143. The...

...result

comprises an accreditation. 146. The system of claim 136 wherein the reporter, if the agricultural product data does not satisfy the compliance requirements, is automatically to generate a negative compliance result. 147. The system of claim 136 wherein the agricultural product data includes any one of a group of information types including pre-production, production,

66...

...economic information.

148. The system of claim 136 wherein the comparator is to receive an agricultural product identifier, and automatically to compare the agricultural product data against the compliance requirements responsive to the receipt of the agricultural product identifier.

149. The system of claim 148 wherein the agricultural product identifier is received at the system via a communications network.

150. The system of claim...

...The system of claim 151 wherein the compliance report comprises a certification report regarding the agricultural product .

67

. The system of claim 151 wherein the compliance report comprises an accreditation report.

156. The system of...

...a sequence of instructions that, when

executed by a machine, cause the machine to:

receive agricultural product data relating to an agricultural product

at a management information system ;

automatically compare the agricultural product data against compliance requirements stored by the management information system; and

automatically generate a compliance result based on the automatic comparison of the agricultural product data against the compliance requirements. 164. A system for automatically certifying an agricultural product , the system including:

first means for automatically comparing agricultural product data

against compliance requirements stored by the management information system; and

second means for automatically generating a compliance result based on the automatic comparison of the agricultural product data against the compliance requirements.

165. A method of communicating agricultural product information to the user, the method comprising:

69

receiving at a management information system a request for agricultural product information, the request including an agricultural product identifier;

accessing an agricultural product record, identified using the agricultural product identifier, at the management information system , the agricultural product record including agricultural product data collected along a chain of custody of the agricultural product ; and

communicating the agricultural product data responsive to the request. 166. The method of claim 165 wherein the request includes a location identifier for a unit of production of the agricultural product .

167. The method of claim 165 wherein the request is received at the management information...

...wireless network, and a cellular telephone network. 169. The method of

claim 165 wherein the agricultural product data includes any one of a group of information types including pre-production, production, environmental...

...transport, product characteristic, social and economic information.

70

. The method of claim 165 wherein the agricultural product data includes

...data certifying compliance with a certification standard. 171. The method of claim 165 wherein the agricultural product data includes compliance data recording compliance with a regulatory standard. 172. The method of claim 165 wherein the agricultural product data includes accreditation data recording compliance with an accreditation standard. 173. The method of claim 165 wherein the communicating comprises generating a markup language document including the agricultural product data and communicating the markup language document over a communications network. 174. The method of claim 165 including inputting the agricultural product identifier into a communications device for communication via the communications network to the management information...

...method of claim 176 wherein the electromagnetic input mechanism comprises a bar code reader, the agricultural product identifier comprises product code, and the inputting comprises reading the product code from a label affixed to the agricultural product . 178. The method of claim 177 wherein the product code comprises any one of a...

...of claim 177 wherein the product code is represented as a bar code. 180.

A system to communicate agricultural product information to the user, the

system comprising:

a report tool to receive a request for agricultural product information,

the request including an agricultural product identifier and to access

an agricultural product record, identified using the agricultural product identifier,, at the management information system , the agricultural product record including agricultural product data collected along a chain of custody of the agricultural product ; and a report generator to output the agricultural product data responsive to the request. 181. The system of claim 180 wherein the request includes a location identifier for a unit of production of the agricultural product .

72

. The system of claim 180 wherein the request includes a location identifier for a biologically meaningful unit in which an agricultural product is produced. 183. The system of claim 182 wherein the biologically meaningful unit includes any...

...wherein the request includes a location identifier for a politically meaningful unit in which an agricultural product is produced. 185. The method of claim 184 wherein the politically meaningful unit includes any...

...wireless network, and a cellular telephone network. 188. The system of claim 180 wherein the agricultural product data includes any one of a group of information types including pre-production, production, environmental...

...transport, product characteristic, social and economic information. 189. The system of claim 180 wherein the agricultural product data includes certification data certifying compliance with a certification standard.

73

. The system of claim 180 wherein the agricultural product data includes compliance data recording compliance with a regulatory standard. 191. The system of claim 180 wherein the agricultural product data includes accreditation data recording compliance with an accreditation standard. 192. The system of claim 180 wherein the report generator is to generate a markup language document including the agricultural product data and communicating the markup language document over a communications network. 193. The system of claim 180 including a communications device to receive the agricultural product identifier for communication via a communications network to the report tool. 194. The system of...

...the communications device includes any one of electromagnetic and sound input mechanisms to receive the agricultural product identifier. 196. The system of claim 195 wherein the electromagnetic input mechanism comprises a bar code reader, the agricultural product identifier comprises product code, and the inputting comprises reading the product code from a label affixed to the agricultural product .

74

. The system of claim 196 wherein the product code comprises any one of a group including a...

...instructions that, when executed by a machine, cause the machine to: receive a request for agricultural product information, the request including an agricultural product identifier; access an agricultural product record, identified using the agricultural product identifier, the agricultural product record including agricultural product data collected along a chain of custody of the agricultural product; and communicate the agricultural product data responsive to the request. 200. A system to communicate agricultural product information to the user, the system comprising: first means for receiving a request for agricultural product information, the request including an agricultural product identifier and for accessing an agricultural product record, identified using the agricultural product identifier, at the management information system, the agricultural product record including agricultural product data collected along a chain of custody of the agricultural product; and second means for outputting the agricultural product data responsive

75

to the request.
